

# Smart Solutions

## Maximization of the availability of your production line

The increasing degree of automation of production and manufacturing processes requires sensors to be used more often. More and more machine data can be collected, saved and evaluated through them.

Thanks to a device-independent data visualization of your weil technology machine, you keep a constant eye on the most important key figures such as quantity and machine productivity. With the aid of error analysis, you can quickly recognize potentials and validate measures that have already been taken – saving time and money.

If unexpected downtime occurs, you can expect immediate and expert help from our service personnel in order to get your machine up and running again quickly.

If you use our “service spectacles” for your weil technology machine, we can get the machine expertise you need for reliable error detection at the machine setup location as soon as possible.

The “service spectacles” transmit a live image to our service technician who is thus able to give your employee on site help with the machine. Your on-site employee will receive the best possible support by means of information and documents being shown in the field of vision of the spectacles.

**This enables us to deal with the task on hand together in no time. Minimizing machine downtime and saving expensive travel costs.**
